

INTERNATIONAL BOURSE AT M2

CHAMPAIGN DEALING ROOM

INNOVATIVE DEALING ROOM FOR COMMODITY AND FINANCIAL
SECURITIES TRADING TO OPEN IN CHAMPAIGN, ILLINOIS, USA

Maastricht (The Netherlands), Champaign (Illinois, USA), November 6, 2007.

The Bourse International Group, LLC today announces that it is developing an innovative dealing room for trading professionals in financial and commodity futures, options and equities, in response to changing industry needs. This dealing room, *The International Bourse at M2*, will be located in Champaign USA, the heart of the agricultural intelligence center of the world.

International Bourse at M2

The business model responds to the fact that the trading floors are disappearing as most, if not all trading is being replaced by electronic trading. *The International Bourse at M2* provides an electronic solution for traders large and small, while also integrating the benefits of a traditional trading floor- livelihood of the market, the noise when prices are changing and interaction with other traders. The interaction between regional U.S. and international players as well as between traders of different asset classes (stocks, bonds and commodities) is unique. In addition, *The International Bourse at M2* will provide real-life trading education facilities for the commodity financial industry.

Champaign, USA

The International Bourse at M2 will be located in Champaign, Illinois, USA, the center of commodity production in the USA, giving traders first hand information on the commodities they trade and the factors that drive prices. The community and the surrounding region are home to the University of Illinois, the world's leading agribusiness institutions, and several international agricultural manufacturers. This will position The Bourse optimally for benefiting from commodity's trading knowledge and experience. Champaign represents the convergence of education, innovation, business and entertainment- all in one place.

This Dealing Room will provide the most accurate, actual and expert knowledge to traders by organizing several morning meetings on both commodity and equity markets (e.g. weather interpretation for commodities by T-Storm Weather). The technology and design will be of the highest level available and advised by Mr. G.J. Dijkstra (Director of Footmark B.V.) who has an impressive track record in building dealing rooms. The Bourse International at M2 will innovate the trading environment and we are excited about the first response from market participants, which are very positive. +says Erik Walker, President of Bourse International Group, LLC.
